Role overview

Designation: Associate

Location: Bangalore, Kolkata, Hyderabad and Mumbai

As an Associate in PwC's Consulting practice, you'll be part of a team of problem solvers leveraging Artificial Intelligence, Machine Learning, Data Engineering, and Analytics to help clients solve complex business challenges. You'll work at the intersection of technology, strategy, and execution—designing data-driven solutions that deliver measurable business impact.

This role demands strong analytical rigor, technical proficiency, and a consulting mindset that can translate data insights into actionable outcomes.

Core responsibilities as an Associate would entail (but not limited to)

- Develop data pipelines, workflows, and models using modern data engineering and machine learning frameworks
- Perform advanced analytics, data wrangling, and feature engineering to extract insights and optimize business processes.
- Work closely with clients to understand their strategic goals, assess challenges, and co-create analytical solutions
- Communicate insights effectively through compelling data storytelling, dashboards, and presentations
- Contribute to PwC's digital innovation agenda by experimenting with emerging technologies such as GenAI, LLMs, automation, and predictive modeling
- Collaborate with cross-functional teams to design, develop, and implement AI and data-driven solutions for real-world business problems
- Ensure compliance with data governance, privacy, and quality standards while adhering to ethical AI practices

Technical Skills	Consulting & Business Skills
• Strong understanding of Machine Learning, Generative AI, Deep Learning and Statistics, both from a conceptual perspective as well as practical implementation. • Knowledge/Experience in programming languages. • Familiarity with Git versioning and coding best practices • Familiarity with data storage technologies, cloud ecosystems and data pipelines • Understanding big data & familiarity with DevOps technologies & tools • Understanding of AI/ML lifecycle management, from problem framing to solution deployment • Hands on experience with no code platforms and GenAI tools.	• Strong analytical, numerical, and problem-solving skills with the ability to interpret complex data into clear insights • Ability to translate technical analysis into business-relevant recommendations • Excellent written and verbal communication; ability to influence and engage diverse audiences • Passion for continuous learning and upskilling

Eligibility criteria

- BE/BTech in Computer Science, IT and Circuit Branches (Electrical and Electronics Engineering, Electronics Communications Engineering, Electronics and Instrumentation Engineering, Electronics and Telecommunications Engineering)
- Should have 60% or equivalent CGPA in Graduation (Minimum Eligibility Criteria and Full-Time course) with no active backlogs.
